INDEX

Volume 36, 1957

ABNORMALITIES: developmental; *Amblystoma punctatum*, 659
Acid: drinking fluid; submandibular salivary gland effect, 576
——: lactic; lactobacilli, 182
——: production; carbohydrate foods; plaque; saliva, 56
——: ——; salivary sediment inhibition, 75
Acrylic root tips: tissue reaction, 27
ADAMS, D.: odontoblastic capillary plexus; rodent incisor, 807*
Airbrasive powder: inhalation, 721
——: tissue response, 602
ALBERS, D. D.: oxygen pressure; oxygen consumption; pulp, 150
Alcohols: acid production; inhibition, 75
Aldolase: saliva, 852
ALLDRITT, W. A. S.: epithelial attachment, 806*
Amalgam: mercury content; condensation procedures, 458
——: strength and phase formation, 986
——: restorations; shadowed colloidin replicas, 623
Amblystoma punctatum: oral developmental abnormalities, 659
Amelodentinal junction, 807,* 911
Amino acid: saliva, 817*
ANDERS, J. T.: salivary chloride, 230
——: thiamine Cl–HCl effect; acid production; salivary amylase dextrinization, 343
ANDERSON, D. J.: masticatory loads, 814*
——: tooth contact; chewing, 21
Anesthesia: local; duration; effect of various drugs, 613
——: ——; epinephrine; blood pressure response, 132
ANTHONY, D. H.: cut tooth surface characteristics; rotating instruments, 957
Antibiotics: bacteremia prevention, 294
——: influence on caries, 349
——: (see also under specific names)
Antigenic analysis: heterofermentative lactobacilli, 361
Anxiety: dental caries, 862
APPLEBAUM, E.: differential growth analysis; vertebrate teeth, 644
Arches: dental; shape, 996
ARMSTRONG, W. G.: collagenase action; organic matrix; sound and carious dentin, 808*
Ash: salivary; caries, 525
AUSKAPS, A. M.: cynomolgus monkey; dentition, 432
Autoradiography: Ca^{45}; rat enamel mineralization, 595
——: teeth, 274, 281

BACTEREMIA: prevention; antibiotics, 294
——: root canals; streptococci, 496
Bacteria: acid production, 75, 769
——: caries, 695, 769
——: caries-immunes, 690
——: egg yolk reaction, 104
——: fecal; caries, 695
——: human teeth; in vitro conditions, 314
——: salivary; lipolytic and esterolytic activity, 338
——: toxins; placental permeability, 507
——: (see also under specific names)
BAERGER, P. J.: acid production from glucose by oral bacteria; Krebs cycle, 769
BARR, J. H.: caries incidence; different locations on teeth, 536
BAVETTA, L. A.: dentin; tryptophan deficiency; histochemistry and electron microscopy, 142
——: dietary thyroid influence; bone; periodontia; tryptophan deficiency, 13
BEAMAN, A. J.: hamster caries progression; streptococci; lactobacilli; general oral and fecal flora, 695
BECKER, N.: thiamine Cl–HCl; acid production; salivary amylase dextrinization, 343
BEERSTECHER, E., JR.: salivary tryptophan; caries, 839
BÉLANGER, L. F.: rat enamel mineralization Ca^{45}; autoradiography; microincineration, 595
BELL, R. W., JR.: salivary tryptophan; caries, 839
BENARDE, M. A.: saliva properties; caries-resistant and caries-susceptible rats, 87
BENKOW, H. H.: radiographic tooth measurements, 641
BERLINER, A.: x-ray density; mandible; variation, 451
BERNICK, S.: dietary thyroid influence; bone; periodontia; tryptophan deficiency, 13
——: tryptophan-deficient rats; dentin; histochemistry; electron microscopy, 142
BHUSSRY, B. R.: enamel surface changes, 409
BIBBY, B. G.: acid production by carbohydrate foods; plaque; saliva, 56
——: caries-producing potentialities; foodstuffs, 61
——: enamel surface changes, 409
——: tooth surface reaction; sodium fluoride, 771
Biometrics: developing dentition, 812*
BIXLER, D.: caries; fluorine and thyroid gland activity, 382
——: ——; thyroid and salivary gland histology, 571
——: caries in desalivated rats; sex hormone influence, 709
——: pilocarpine effect; caries, 883
——: salivariadenectomy; reproductive organ effects; female rat, 559
——: salivary glands of hypophysectomized rats; testosterone; thyroxine; cortisone effects, 566

*Abstract.

——: systemic fluoride and thyroid gland activity; rat caries, 304
——: thyroid feeding; caries effect; pair-feeding technics, 880
BLACKWOOD, H. J. J.: intermediate cementum, 810*
BLAKE, G. C.: peri-tubular translucent zone; dentin, 808*
BLAYNEY, J. R.: caries experience; Evanston children; exposed to fluoridated water, 208
Blood clot: organization; epithelized pocket, 4
Blood pressure: epinephrine-containing local anesthetic solutions, 132
Bone: dietary thyroid; tryptophan deficiency, 13
——: neuro-histology, 805*
BONNER, J. F.: tooth surface reaction; sodium fluoride, 771
BOYD, J. D.: dental autoradiography; printing technics, 281
——: ——; radioisotope choice, 274
BRADFORD, E. W.: matrix changes; dentin; caries, 809*
——: rostral teeth and rostrum; *Pristis microdon*, 663
BRADLEY, T.: succinic dehydrogenase, DPN cytochrome reductase, cytochrome oxidase, and catalase in oral, liver, and brain tissues, 581
Brain cortex: succinic dehydrogenase; cytochromes; catalase, 581
BREWER, H. E.: decreased pulp vascularity; experimental; caries effect, 92
Bridge: abutment teeth; photoelastic experiment, 652*
Brucella mellitensis: serum; salivary antibody titers, 112
BRUDEVOLD, F.: tooth discoloration; metallic ions, 753
——: tooth surface reaction; sodium fluoride, 771
BRYSON, W. F.: hamster; vitamin A deficiency, 935
BULLOCK, F. A.: caries experience; salivary sodium; potassium; solids and ash, 525
——: mineralized tissues; rat; fluoride ingestion, 391
BURNETT, G. W.: hamster; dentin and enamel; KOH ethylene glycol extracted; composition, 684
BURRILL, D. H.: I.A.D.R. Annual Meeting; Executive Proceedings, 1957, 800
BUTTNER, W.: enamel solubility; intact molars; fluoride solution, 897
BUXBAUM, J. D.: diet; glycoprotein deposition; caries; hamster, 173

CALCIFICATION: dietary casein-sucrose ratios, 904
——: sequence; eruption; mandibular teeth, 992
Calcium: radioactive; rat enamel mineralization, 595
Calcium hydroxide: pulp response, 653*
Calculus: physico-chemical studies, 653*
——: tetracalcium monohydrogen triphosphate trihydrate, 816*
——: x-ray analysis, 653*
CALDWELL, R. C.: intact enamel surface; microhardness, 732
Capillary network: gingiva; vasomotor activity, 813*
Carbohydrate: acid production, 56
——: caries, 61, 533
Carbohydrate content: enamel, 325
Carbonate: enamel, 765
Carcinogenesis: hamster cheek pouch, 48
Caries: alloxan diabetes, 68
——: antibiotic influences, 349
——: anxiety, 862
——: Baltimore, 546
——: carbohydrates, 56, 61, 533
——: collagenase action, 808*
——: decreased pulp vascularity, 92
——: dentifrice, 237
——: dentin matrix changes, 808*
——: Diamox, 372
——: diet, 173
——: dietary casein-sucrose ratios, 904
——: distribution on teeth, 536
——: enamel carbonate, 765
——: fluoride effect, 118, 124, 220, 304, 382, 399, 771, 780, 787, 789, 889, 897
——: glycoprotein deposition, 173
——: hereditary; rats, 87
——: hormones, 382, 709, 880
——: immune individuals; clinical and bacteriologic studies, 690
——: ——; plaque microflora, 331
——: inhibitors; screening, 307
——: Israeli, 203
——: lactobacilli, 331, 375, 690, 695, 828
——: London children; comparison, 812*
——: melanoidin formation, 233
——: Netherlands, 795
——: pilocarpine effect, 883
——: production potentialities; foodstuffs, 61
——: progression; hamster; bacteria, 695
——: salivary adenectomized rats, 95, 559, 709, 886
——: salivary citrate, 823
——: salivary gland histology, 571
——: salivary protease, 223
——: salivary sodium; potassium and solids and ash, 525
——: salivary tryptophan, 839
——: selenium, 895
——: thyroid effects, 95, 382, 571, 880
——: thyroid gland, 304
——: tin compounds, 118, 399, 780, 787
——: tyrothricin, 237
——: vanadium pentoxide, 787
CASTALDI, C.: Class II restoration contours; matrix technics, 462
Casting investments: expansion, 974
——: strength; hygroscopic setting expansion, 967
Catalase: oral, liver, and brain tissues, 581
CECIL, H. C.: acute inflammation; Dilantin effect, 927
Cementum: intermediate, 810*
CHARBENEAU, G. T.: cut tooth surface characteristics; rotating instruments, 957
——: dental handpieces; lubricants, 479
——: shadowed colloidin replicas of teeth; with amalgam restorations, 623
CHAUNCEY, H. H.: lipolytic and estrolytic activity; saliva and salivary organisms, 338

——: parotid saliva; total esterases, 713
Chelation demineralization: effect on various histochemical stains, 759
Chewing: tooth compression, 286
——: tooth contact, 21
Chloride: saliva, 230
Cholesterol: salivary mucin, 100
CHONG, M. P.: hygroscopic setting expansion and strength; casting investments; surface area, 967
Citrate: salivary; caries, 823
CLARK, P. G.: salivary glands; hormone effects, 403
CLARK, R. J.: Class II restoration contours; matrix technics, 462
CLEMENTS, W. G.: submandibular salivary gland enlargement; acidic and basic solutions; drinking fluid, 576
COHEN, A. H.: lactobacillus count; comparison; Snyder colorimetric test; Rogosa medium, 375
Collagenase: organic matrix, 808*
——: saliva, 717
Compression: chewing load, 286
Condensation: effect on mercury content; amalgam restorations, 458
Contra-angles: lubricants, 479
COOLEY, F. H.: antibiotics; bacteremia prevention, 294
COOLIDGE, T. B.: enamel carbonate; caries, 765
COPENHAVER, W. M.: oral developmental abnormalities; *Amblystoma punctatum*, 659
Copper: tooth discoloration, 753
Cortisone: salivary gland effects, 566
COX, G. C.: submandibular salivary gland enlargement; acidic and basic solutions; drinking fluid, 576
CROWLEY, J.: protein-bound sulfhydryl and disulfide groups; gingiva, 255
Crown diameters: mesiodistal; deciduous and permanent teeth, 39
Cynomolgus monkey: dentition, 432
Cytochrome: oral, liver, and brain tissues, 581

DAVIES, T. G. H.: neuro-histology of bone, 805*
DAY, H. G.: powdered enamel solubility; sodium fluoride and stannous fluoride; buffered, 118
Deciduous dentition: biometrical study, 812*
Degeneration: epithelium; periodontal pocket, 4
DEGRANGE, D. W.: submandibular salivary gland enlargement; acidic and basic solutions; drinking fluid, 576
Densification: porcelain, 950
Dental care needs: Baltimore, 546
Denticles: attached; tooth germ injury, 809*
Dentifrice: stannous fluoride; dicalcium phosphate; caries, 399
Dentin: collagenase action, 808*
——: hamster; composition, 684
——: matrix changes; caries, 809*
——: pulverized; tissue response, 602
Dentinoenamel junction, 807,* 911
DETWILER, S. R.: oral developmental abnormalities; *Amblystoma punctatum*, 659
Development: prenatal; systemically administered trypan blue, 677
Diabetes: alloxan; caries incidence; rat, 68
Diamox: caries resistance, 372
Diaphragms: radiation intensity, 291
Dibenzanthracene: transplanted tooth germ effects, 153
Dicalcium phosphate: dentifrice; caries, 399
Diet: casein-sucrose ratios; caries, 904
——: thyroid, 13
——: tryptophan deficiency, 13, 142
Dilantin: acute inflammation, 927
DIODATI, R. R.: caries incidence; different locations on teeth, 536
DISALVO, N. A.: tooth compression; chewing load, 286
Discoloration: teeth; metallic ions, 753
DISRAELY, M. N.: hamster caries progression; streptococci; lactobacilli; general oral and fecal flora, 695
Disulfide groups: gingiva, 255
DIXON, A. D.: nerve plexuses; oral mucosa, 807*
DOCKING, A. R.: hygroscopic setting expansion and strength; casting investments; surface area, 967
——: hygroscopic vs. normal setting expansion; casting investments, 974
DODD, M. C.: dental plaque; microflora; caries immune and susceptibles, 331
DONNISON, J. A.: hygroscopic setting expansion and strength; casting investments; surface area, 967
DOWSE, C. M.: fluoride uptake; enamel defects, 816*
DREIZEN, S.: melanoidin formation; carious teeth, 233
Drinking water: fluoride state, 192
Drugs: effect on oxygen consumption; pulp, 447

ECHINOIDEA teeth, 811*
Editor's Viewpoint: 1, 163, 327, 493, 655, 819
EDMONDS, E. J.: salivary tryptophan; caries, 839
EDWARDS, L. F.: extra-osseous innervation; gingiva, 516
Egg yolk reactions: oral organisms, 104
EICHEL, B.: succinic dehydrogenase, DPN cytochrome reductase, cytochrome oxidase, and catalase in oral, liver, and brain tissues, 581
Electrolytic action: pain, 632
Electron microscopy: dentin, 142
Enamel: carbonate, 765
——: carbohydrate content, 325
——: defects; fluoride uptake, 816*
——: hamster; composition, 684
——: microhardness; intact surface, 732
——: mineralization, 595
——: organic component, 815*
——: pulverized; tissue response, 602
——: solubility; fluorides, 118, 889, 987
——: surface; surface active agents, 166
——: surface changes, 409
ENGLANDER, H. R.: sodium N-lauroyl sarcosinate; lactobacillus inhibition, 129

ENGLISH, J. A.: x-ray irradiation; dental effects, 417
Epinephrine: local anesthetics; blood pressure responses, 132
Epithelial attachment: 806*
Epithelial differentiation: developmental stages, 808*
ERSHOFF, B.: dietary thyroid influence; bone; periodontia; tryptophan deficiency, 13
Eruption: tooth; influence of vascularity and innervation, 669
——: rabbit mandibular incisor; periodontal tissue role, 810*
——: sequence; calcification; mandibular teeth, 992
Esterases: parotid saliva, 713
Esterolytic activity: saliva and salivary organisms, 338
Esters: acid production and inhibition, 75
Ethers: acid production and inhibition, 75

FABIAN, F. W.: saliva properties; caries-resistant and caries-susceptible rats, 87
FAIRHURST, C. W.: dental amalgam; strength and phase formation, 986
FANIBUNDA, E. B.: amelodentinal junction; optical properties, 807*
FATH, E. H.: salivary citrate; dental caries experience, 823
FEARNHEAD, R. W.: neuro-histology of bone, 805*
FELDMAN, I.: fluoride state; drinking water, 192
FISCHER, R. B.: decreased pulp vascularity; experimental; caries effect, 92
FISHER, A. K.: pulp; oxygen consumption; drug and material effects, 447
——: ——; ——; oxygen pressure, 150
FITZGERALD, R. J.: salivary citrate; caries experience, 823
FLEMING, H. S.: transplanted tooth germs; 1, 2, 5, 6-dibenzanthracene effect, 153
Fluorescent microscopy: healing gingival epithelium, 808*
Fluoride: caries, 118, 124, 203, 208, 220, 304, 382, 399, 771, 780, 787, 789, 897, 981
——: enamel; lactobacilli, 182
——: enamel solubility, 118, 889, 987
——: hard tissue effects, 391, 816*
——: metabolism, 552
——: sodium silico, 124, 386
——: stannous, 118, 399, 780, 784, 787
——: thyroid gland activity; caries, 382
——: tooth surface reaction, 771, 815*
——: uptake; enamel defects, 816*
Fluorostannite: potassium; topical application, 780
Foodstuffs: caries-producing potentialities, 61
FORSCHER, B. K.: acute inflammation; Dilantin effect, 927
FORZIATI, A. F.: dentinoenamel junction, 911
FRANCK, E. B.: antigenic analysis; heterofermentative lactobacilli strains, 361
FRAZIER, T. M.: caries; dental care needs; Baltimore, 546
FREMLIN, J. H.: fluoride exchange; tooth surface, 815*
FRIBERG, U.: histophysical studies; scorbutus; teeth, 810*
Fusiforms: infant mouth, 513

GARN, S. M.: calcification vs. eruption sequence; mandibular molar and premolar teeth, 992
GAUNT, A.: opodymous kitten; jaws and teeth development, 811*
GDALIA, J.: fluorine; Israeli children; caries, 203
GELLER, J. H.: salivary spectrophotometry, 745
GERENDE, L. J.: dietary casein-sucrose ratios; caries, 904
GERSHON-COHEN, J.: cardiostasis; tea with high fluorine content, 220
Gies, W. J.: Tribute, 658
GILLEY, E. J.: melanoidin formation; carious teeth, 233
GILMAN, E.: individual bacterial strains in human teeth; in vitro actions, 314
GILMORE, H. W.: syneresis and imbibition; reversible hydrocolloid, 472
GILMORE, R. W.: intact surface enamel; microhardness, 732
Gingiva: capillary network; vasomotor activity, 813*
——: extra-osseous innervation, 516
——: protein-bound sulfhydryl and disulfide groups; normal and inflamed, 255
GISH, C. W.: caries reduction; topical stannous fluoride, 784
——: topically applied potassium fluorostannite; caries experience, 780
GLICKMAN, I.: protein-bound sulfhydryl and disulfide groups; gingiva, 255
Glucose: acid production; oral microorganisms, 769
Glycoprotein: deposition, 173
GOLDMAN, H. M.: radiographic visualization; periodontal vascular system, 245
——: transeptal fibers; behavior; periodontal disease, 249
GRAPE-RAMFJORD, G.: airbrasive powder inhalation; effects, 721
——: tissue response; airbrasive powder; pulverized enamel and dentin, 602
GREEN, G. E.: caries-immune individuals; clinical and bacteriologic studies, 690
——: dental plaque; microflora; caries-immune and -susceptible, 331
——: salivary lactobacilli and dental caries activity; children, 828
GREULICH, R. C.: histophysical studies; scorbutus; teeth, 810*
Growth analysis: vertebrate teeth, 644

HABERMAN, S.: antibiotics; bacteremia prevention, 294
HALEY, M. I.: caries; early carbohydrate administration, 533
HAMILTON, T. R.: hemolytic streptococci; root canals; bacteremia; rheumatic fever, 496

Hamster: cheek pouch; carcinogenesis; experimental, 48
——: dentin and enamel composition, 684
——: vitamin A deficiency, 935
HANCOCK, J. A., JR.: bacterial toxins; placental permeability, 507
——: systemically administered trypan blue; prenatal development, 677
Handpieces: dental; lubricants, 479
HANSON, L. S.: x-ray diffraction; dental effects, 417
Hardness: micro; surface enamel, 732
HARDWICK, J. L.: fluoride exchange; tooth surface, 815*
HARGREAVES, G.: acid production; inhibition; ethers; esters; phenols; alcohols, 75
Healing: gingival epithelium; fluorescent microscopy, 808*
——: pulp; pressure effect, 437
HEIN, J. W.: tooth surface reaction; sodium fluoride, 771
Hemosiderosis: tooth iron content, 750
HENDERSON, N.: dietary casein-sucrose ratios; caries, 904
Heredity: caries; rats, 87
——: malocclusion; rabbit, 817*
——: morphologic variations; mandibular second premolars, 263
HESS, W. C.: dietary casein-sucrose ratios; caries, 904
HILGER, E. C., JR.: submandibular salivary gland enlargement; acidic and basic solutions; drinking fluid, 576
HILL, I. N.: caries experience; Evanston children, exposed to fluoridated water, 208
Histochemistry: dentin, 142
——: developing tooth germ, 805*
——: effect of nitric acid and chelation demineralization, 759
Histophysical studies: scorbutus; teeth, 810*
HODGE, H. C.: fluoride state; drinking water, 192
——: tooth surface reaction; sodium fluoride, 771
HOERMAN, K. C.: salivary aldolase, 852
——: sodium N-lauroyl sarcosinate; lactobacillus inhibition, 129
HOLLOWAY, P. J.: thyroid hormone, analogue; rat incisor dentin effect, 813*
HOMMA, M.: photoelastic consideration; bridge abutment teeth, 652*
HOPPERT, C. A.: saliva properties; caries resistance; caries-susceptible rats, 87
——: salivary protease; caries-resistant and caries-susceptible rats, 223
Hormones: caries, 382, 709, 880
——: salivary gland effects, 403, 556
HOWARD, L. V.: dentin sensitivity, 814*
HOWELL, C. L.: caries reduction; topical stannous fluoride, 784
——: topically applied potassium fluorostannite; caries experience, 780
HUNT, H. R.: protease activity; caries-resistant and caries-susceptible rats, 223
——: saliva properties; caries-resistant and caries-susceptible rats, 87
HURST, V.: fusiforms; infant mouth, 513
Hydrocarbons: carcinogenesis; hamster cheek; pouch, 48
Hydrocolloid: reversible; syneresis and imbibition, 472
Hygroscopic setting expansion; casting investments, 974
——: strength of casting investments, 967
Hypophysectomy: salivary gland; hormone effect, 566

IA.D.R.: Annual Meeting, 1957; Executive Proceedings, 800
——: British Division; Proceedings; 1957, 805
——: Japanese Division; Proceedings, 652
——: Necrology, 804
——: New members elected; 1957, 803
——: Officers elected; 1957, 803
Imbibition: reversible hydrocolloid, 472
Infant: oral fusiforms, 513
Infection: dental patient, 932
Inflammation: Dilantin, 927
Inhalation: airbrasive powder, 721
Innervation: gingiva; extra-osseous, 516
INVERSO, H. S.: dental plaque; microflora; caries immunes and susceptibles, 331
Iron: teeth; hemosiderosis, 750
——: tooth discoloration, 753
Irradiation: x-ray; dental effects, 417
IRWIN, M.: influence of surface agents; enamel surface decalcification, 166
——: salivary mucin; cholesterol, 100
ISAAC, S.: tooth discoloration; metallic ions, 753
Israeli: caries; fluorine, 203

JACOBS, M. H.: enamel carbonate; caries, 765
JAMES, V. E.: nitric acid and chelation demineralization; effect on histochemical stains, 759
J.D.R.: Supporting Associates, 162, 326, 492, 654, 818, 1004
JENKINS, G. N.: fluoride uptake; enamel defects, 816*
——: oral pH; before and after meals, 816*
JENNINGS, W. H.: dentinoenamel junction, 911
JENSEN, E.: mesiodistal crown diameters; deciduous and permanent teeth, 39
JOHANSEN, E.: hamster caries progression; streptococci; lactobacilli; general oral and fecal flora, 695
JOHNSON, M. J.: dental caries resistance; Diamox, 372
JORDAN, W. A.: caries inhibition; topical sodium silicofluoride and sodium fluoride, 124

KABOTA, H.: photoelastic experiments; prosthetic dentistry, 652*
KAI-JEN YEN, P.: mesiodistal crown diameters; deciduous and permanent teeth, 39
KALNINS, V.: pulp healing; pressure effect, 437
KENNEDY, D. R.: hemolytic streptococci in root canals; bacteremia; rheumatic fever, 496

KERR, A. C.: saliva; free amino acids; phosphoethanolamine, 817*
KERR, D. A.: airbrasive powder inhalation; effects, 721
——: tissue response; airbrasive powder; pulverized enamel and dentin, 602
KING, W. J.: screening caries inhibitors; laboratory methods, 307
KLEINBERG, I.: oral pH; before and after meals, 816*
KNIGHTON, H. T.: bacterial toxins; placental permeability, 507
——: systemically administered trypan blue; prenatal development, 677
KOHN, H.: diet; glycoprotein deposition; caries; hamster, 173
Krebs cycle: acid production, 769
KRESHOVER, S. J.: bacterial toxins; placental permeability, 507
——: systemically administered trypan blue; prenatal development, 677

Lactobacilli: caries, 331, 375, 690, 695, 828
——: heterofermentative; antigenic analysis, 361
——: inhibition; sodium N-lauroyl sarcosinate, 129
——: lactic acid formation; fluoridized enamel, 182
LAHEY, M. E.: tooth iron content; hemosiderosis, 750
LANDING, B. H.: tooth iron content; hemosiderosis, 750
LAWSON, M. E., JR.: dentinoenamel junction, 911
Lead nitrate: tooth discoloration, 753
LEAVER, A. G.: influence of surface active agents; enamel surface decalcification, 166
——: salivary mucin; cholesterol, 100
LEVY, B. M.: oral developmental abnormalities; *Amblystoma punctatum*, 659
LEWIS, A. B.: calcification vs eruption sequence; mandibular molar and premolar teeth, 992
LINGHORNE, W. J.: degeneration; epithelized pocket; blood clot organization, 4
LIONETTI, F.: parotid saliva; total esterases, 713
Lipoid distribution: rat developing teeth, 805*
Lipolytic activity: saliva and salivary organisms, 338
LISANTI, V. F.: parotid saliva; total esterases, 713
LITTLE, K.: organic components; enamel, 815*
Liver: succinic dehydrogenase; cytochromes; catalase, 581
LOSEE, F. L.: dentinoenamel junction, 911
——: dietary casein-sucrose ratios; caries, 904
Lubricants: dental handpieces, 479
LUDUENA, F. P.: infiltration anesthesia duration; local effect of various drugs, 613
LUDWIG, F. J.: mandibular second premolars; morphology and inheritance, 263
LUDWIG, T. G.: acid production; carbohydrates; foods; plaque; saliva, 56
——: caries-producing potentialities; foodstuffs, 61

MacGREGOR, A. B.: echinoidea teeth, 811*
MacINNES, D. G.: echinoidea teeth, 811*
MAHLER, I. R.: lipolytic and esterolytic activity; saliva and salivary organisms, 338
Malocclusion: heredity; rabbit, 817*
MANAHAN, R. D.: screening caries inhibitors; laboratory methods, 307
Mandible: shape, 996
——: x-ray density, 451
Mandibular disc displacement: experimental, 813*
Mandibular second premolars: morphology and inheritance, 263
MANLY, R. S.: acid production; inhibition; ethers; esters; phenols; alcohols, 75
MANTEL, N.: caries experience; salivary sodium, potassium, solids and ash, 525
MARCUSE, F. L.: anxiety and dental caries, 862
MARDFIN, D. F.: nitric acid and chelation demineralization; effect on histochemical stains, 759
MARSLAND, E. A.: echinoidea teeth, 811*
MARUSHIMA, M.: dentinogenic response; pulp; calcium hydroxide, 653*
Masticatory loads, 814*
Materials: dental; solubility, 977
——: effect on oxygen consumption; pulp, 447
Matrix: Class II restorations, 462
Maxilla: shape, 996
McCANN, H. G.: mineralized tissues; rat; fluoride ingestion, 391
McCARTHY, F. M.: blood pressure responses; epinephrine-containing local anesthetic solutions, 132
McCAULEY, H. B.: caries; dental care needs; Baltimore, 546
McCLENDON, J. F.: experimental cariostasis; tea with high fluorine content, 220
McHUGH, W. D.: healing gingival epithelium; fluorescent microscopy, 808*
Melanoidin: carious teeth, 233
MELLANBY, M.: caries; London children; comparison, 812*
Mercury: amalgam restorations; condensation procedures, 458
——: tooth discoloration, 753
MERRINGTON, W. R.: thyroid hormone analogue; rat incisor dentin effect, 813*
Mesiodistal crown diameters: teeth, 39
Microincineration: rat enamel mineralization, 595
Microradiography: peri-tubular translucent zone; dentin, 808*
MILLER, B. G.: tooth resorption and eruption; influence of vascularity and innervation, 669
MITCHELL, D. F.: dental caries resistance; Diamox, 372
MIYAUCHI, T.: photoelastic experiments; prosthetic dentistry, 652*

MONGKOLLUNGSANA, D.: extra-osseous innervation; gingiva, 516
Monkey: cynomolgus; dentition, 432
MOORREES, C. F. A.: mesiodistal crown diameters; deciduous and permanent teeth, 39
MOSNY, J. J.: melanoidin formation; carious teeth, 233
MOSS, M. L.: differential growth analysis; vertebrate teeth, 644
Mucin: cholesterol, 100
MUHLER, J. C.: caries; fluorine; thyroid gland activity, 382
——: ——; reduction; topical stannous fluoride, 784
——: ——; stannous fluoride; decalcium phosphate dentifrice, 399
——: ——; thyroid and salivary gland histology, 571
——: caries in desalivated rats; sex hormone influence, 709
——: decreased pulp vascularity; experimental; caries effect, 92
——: enamel solubility; intact molars; fluoride solutions, 897
——: ——; surface; fluorides, 889
——: natural and artificial fluoridated waters; metabolism, 552
——: pilocarpine effect; caries, 883
——: salivariadenectomy; duct ligation; caries effects, 866
——: ——; reproductive organ effects; female rat, 559
——: salivary glands; hormone effects, 403
——: ——; hypophysectomized rats; testosterone; thyroxine; cortisone effects, 566
——: selenium effect; caries, 895
——: sodium fluoride; sodium silicofluoride; stannous fluoride; metabolism comparison, 386
——: systemic fluoride and thyroid gland activity; rat caries, 304
——: thyroid feeding; caries effect; pair-feeding technics, 880
——: thyroid function; dental caries experience; salivary-adenectomized rats, 95
——: topically applied potassium fluorostannite; caries experience, 780
——: vanadium pentoxide; fluorides; tin compounds; caries experience, 787
MUMFORD, J. M.: electrolytic action; pain, 632
MUNTZ, L.: individual bacterial strains in human teeth; in vitro conditions, 314
MUNTZ, M. L.: intact surface enamel; microhardness, 732
MYERS, H. I.: egg yolk reaction; oral organisms, 104

NEBERGALL, W. H.: powdered enamel solubility; sodium fluoride and stannous fluoride; buffered, 118
NEFF, J. H.: dental patient infection; inadvertent transmission, 932
Nerve plexuses: oral mucosa, 807*
NESS, A. R.: hereditary incisor malocclusion; rabbit, 817*
——: rabbit mandibular incisor eruption; periodontal tissue role, 810*
Netherlands: caries, 795
NEUMANN, H. H.: tooth compression; chewing load, 286
Neuro-histology: bone, 805*
NEUWIRTH, I.: acid production from glucose by oral bacteria; Krebs cycle, 769
NEVIN, R. B.: tooth surface reaction; sodium fluoride, 771
NICHOLS, M. S.: alloxan diabetes; caries incidence, rat, 68
Nitric acid: demineralization; effect on histochemical stains, 759
NORMAN, R. D.: amalgam restorations; mercury content; condensation procedures, 458
——: solubility; dental materials, 977
——: syneresis and imbibition; reversible hydrocolloid, 472
Nutrition: (see diet)

Occlusal contact: chewing, 21
Odontoblastic capillary plexus: rodent incisor, 807*
Opodymous kitten: jaws and teeth development, 811*
Oral mucosa: nerve plexuses, 807*
Oral tissues: succinic dehydrogenase; cytochromes and catalase, 581
Organisms: (see Bacteria)
O'ROURKE, W. F.: wear resistance of teeth; abrasion method, 739
OSADA, N.: photoelastic experiments; prosthetic dentistry, 652*
OSGOOD, D. R.: autoradiography; printing technics, 281
OSTER, R. H.: diet; glycoprotein deposition; caries; hamster, 173
Oxygen consumption: pulp; drug and material effects, 447
——: ——; oxygen pressure, 150

Pain: electrolytic action, 632
PECKHAM, S. C.: dietary casein-sucrose ratios; caries, 904
PERDUE, H. S.: wear resistance of teeth; abrasion method, 739
Periodontal disease: dietary thyroid; tryptophan deficiency, 13
——: regeneration in epithelized pocket; blood clot; organization, 4
——: salivary collagenase, 717
——: severity; social factor, 922
——: transeptal fibers; behavior, 249
Periodontium: vascular system; radiographic visualization, 245
PERMAR, D.: salivary lactobacilli and dental caries activity; children, 828
Peroxidase: saliva, 843
PERSSON, P. A.: fluorescent microscopy; healing gingival epithelium, 808*
PETERSEN, E. E.: effect of diaphragms; radiation intensity, 291
PETERSON, J. K.: caries inhibition; topical sodium silicofluoride and sodium fluoride, 124
PEYTON, F. A.: cut tooth surface characteristics; rotating instruments, 957
——: dental handpieces; lubricants, 479
——: shadowed colloidin replicas of teeth; with amalgam restorations, 623

pH: oral; before and after meals, 816*
Phase formation: amalgam, 986
Phenol: acid production; inhibition, 75
PHILLIPS, P. H.: wear resistance of teeth; abrasion method, 739
PHILLIPS, R. W.: amalgam restorations; mercury content; condensation procedures, 458
——: Class II restoration contours; matrix technics, 462
——: solubility; dental materials, 977
——: syneresis and imbibition; reversible hydrocolloid, 472
PHIPPS, G. T.: anxiety and dental caries, 862
Phosphoethanolamine: saliva, 817*
Photoelastic experiment: bridge abutment teeth, 652
——: prosthetic dentistry, 652*
Physiological tooth movement: measurement, 814*
PICTON, D. C. A.: masticatory loads, 814*
——: physiological tooth movement; measurement, 814*
——: tooth contact; chewing, 21
PIGMAN, A.: intact surface enamel; microhardness, 732
PIGMAN, W.: individual bacterial strains in human teeth; in vitro actions, 314
Pilocarpine: caries effect, 883
PITT-RIVERS, R.: thyroid hormone analogue; rat incisor dentin effect, 813*
Placental permeability: bacterial toxins, 507
Plaque: dento-bacterial; acid production; carbohydrates, 56
——: ——; microflora; caries immunes and susceptibles, 331
Porcelain: densification, 950
——: teeth; porosity measurement, 945
Porosity: porcelain teeth, 945
Potassium: fluorostannite; topically; caries experience, 780
——: salivary; caries, 525
POWELL, R.: individual bacterial strains in human teeth; in vitro conditions, 314
Pressure: dental pulp healing, 437
Pristis microdon: rostral teeth and rostrum, 663
Protease: saliva; caries, 223
PROUTT, L. M.: diet; glycoprotein deposition; caries; hamster, 173
Pulp: decreased vascularity; caries effect, 92
——: dentinogenic response; calcium hydroxide, 653*
——: healing; pressure effects, 437
——: oxygen consumption; drug and material effects, 447
——: ——; oxygen pressure, 150

Radiographic tooth measurements, 641
Radiographic visualization: periodontal vascular system, 245
Radioisotopes: dental autoradiography, 247, 281
RAMFJORD, S.: airbrasive powder inhalation; effects, 721
——: tissue response; airbrasive powder; pulverized enamel and dentin, 602
Replicas: shadowed colloidin; teeth with amalgam restorations, 623
Reproductive organs: effect of salivari-adenectomy, 559
Resorption: tooth; influence of vascularity and innervation, 669
Restorations: Class II contour; matrix technics, 462
Rheumatic fever: root canals; streptococci, 496
ROBINSON, H. B. G.: Editor's Viewpoint, 1, 163, 327, 493, 655, 819
ROBINSON, N. P.: oxygen pressure; oxygen consumption; pulp, 150
——: pulp oxygen consumption; drug and material effects, 447
ROBINSON, W. E.: salivary aldolase, 852
ROGOSA, M.: hamster caries progression; streptococci; lactobacilli; general oral and fecal flora, 695
ROSE, G. A.: saliva; free amino acids; phosphoethanolamine, 817*
ROSEN, S.: saliva properties; caries-resistant and caries-susceptible rats, 87
——: salivary protease; caries-resistant and caries-susceptible rats, 223
ROSENTHAL, S. L.: dental patient infection; inadvertent transmission, 932
Rostral teeth: *Pristis microdon*, 663
Rotating instruments: tooth surface characteristics, 957
ROTH, G. D.: egg yolk reactions; oral organisms, 104
ROVELSTAD, G. H.: salivary spectrophotometry, 745
ROWLES, S. L.: tetracalcium monohydrogen triphosphate trihydrate; calculus, 816*
RUSHTON, M. W.: attached denticles; tooth germ injury, 809*
RUSSELL, A. L.: social factor; periodontal disease severity, 922
RUSSELL, K. L.: screening caries inhibitors; laboratory methods, 307
RYGE, G.: dental amalgam; strength and phase formation, 986

Saliva: acid production, 56, 343
——: aldolase, 852
——: amylase; dextrinization, 343
——: antibody titers; *Brucella melitensis*, 112
——: ash; caries, 525
——: chloride, 230
——: citrate; caries, 823
——: collagenase; periodontal disease, 717
——: flow; caries, 883
——: free amino acids; phosphoethanolamine, 817*
——: lactobacilli; caries, 331, 375, 690, 695, 828
——: lipolytic and esterolytic activity, 338
——: mucin; cholesterol, 100
——: parotid; total esterases, 713
——: peroxidase, 843
——: potassium; caries, 525
——: properties; caries resistant and caries-susceptible rats, 87
——: sodium; caries, 525
——: solids; caries, 525

——: spectrophotometry, 745
——: tryptophan; caries, 839
Salivariadenectomy, 95, 559, 886
Salivary glands: caries, 95, 571, 886
——: hormone effects, 403, 566
——: submandibular enlargement; acidic and basic drinking fluid, 576
Salivary sediment: acid production; inhibition, 75
SALLEY, J. J.: hamster; vitamin A deficiency, 935
——: hydrocarbon; carcinogenesis; hamster cheek pouch changes, 48
Sarcosinate: sodium N-lauroyl; lactobacillus inhibition, 129
SCHUBACK, P.: radiographic visualization; periodontal vascular system, 245
SCHUBERT, W. K.: tooth iron content; hemosiderosis, 750
SCHUMACHER, E. R.: oxygen consumption; drug and material effects, 447
——: pulp; oxygen pressure; oxygen consumption, 150
SCHWARTZ, M. L.: solubility; dental materials, 977
Scorbutus: histophysical studies; teeth, 810*
SCOTT, J. H.: dental arches; shape, 996
——: epithelial attachment, 806*
Screening: caries inhibitors; laboratory methods, 307
Selenium: caries, 895
SEMMELMAN, J. O.: densification; dental porcelain, 950
——: porosity of porcelain teeth; measurement, 945
Sensitivity: dentin, 814*
Serum: antibody titer; *Brucella melitensis*, 112
SHAFER, W. G.: caries; fluorine and thyroid gland activity, 382
——: ——; thyroid and salivary gland histology, 571
——: caries in desalivated rats; sex hormone influence, 709
——: pilocarpine effect; caries, 883
——: salivary gland extirpation; duct ligation; caries effects, 886
——: salivary glands; hormone effects, 403
——: selenium effect; caries, 895
——: submaxillary and sublingual salivary gland duct and vessel ligation; effects, 866
——: thyroid function; dental caries experience; salivary adenectomized rats, 95
SHARBONDY, G. P.: oxygen pressure; oxygen consumption, 150
——: pulp; oxygen consumption; drug and material effects, 447
SHAW, J. H.: alloxan diabetes; caries incidence; rat, 68
——: caries; white and cotton rat; antibiotic influences, 349
——: cynomolgus monkey; dentition, 432
SHIEGEUCHI, H.: photoelastic consideration; bridge abutment teeth, 652*
SHIERE, F. R.: tyrothricin dentifrice; caries control, 237
SHKLAIR, I. L.: sodium N-lauroyl sarcosinate; lactobacillus inhibition, 129
SIEVERT, H. W.: wear resistance of teeth; abrasion method, 739
Silver nitrate: tooth discoloration, 753
SIMS, R. W.: dental autoradiography; printing technics, 281
Social factor: periodontal disease severity, 922
Sodium: salivary; caries, 124, 525
Sodium fluoride: enamel solubility, 118
——: metabolism, 386
——: tooth surface reaction, 771
——: topical; caries inhibition, 124
Sodium N-lauroyl sarcosinate: lactobacillus inhibition, 129
Sodium silicofluoride, 124, 386
Solubility: dental materials, 977
——: enamel, 889, 897
Spectrophotometry: saliva, 745
SPIES, T. D.: melanoidin formation; carious teeth, 233
SPINANGER, J.: tooth iron content; hemosiderosis, 750
SPRINZ, R.: mandibular disc displacement; experimental, 813*
STACK, M. V.: biometry; developing deciduous dentition, 812*
STAFSETH, H. J.: salivary protease; caries-resistant and caries-susceptible rats, 223
——: carbohydrate content of human enamel, 325
STANDISH, S. M.: submaxillary and sublingual salivary gland duct and vessel ligation effects, 866
Stannous chloride: tooth discoloration, 753
Stannous fluoride: caries, 399, 784
——: enamel solubility, 118
——: metabolism, 386
STAPLE, P. H.: vasomotor activity; human gingival capillary networks, 813*
STEINMAN, R. R.: caries; early carbohydrate administration, 533
STEPHENS, R. G.: caries incidence; different locations on teeth, 536
Sterility: dental office, 932
Strength: amalgam, 986
Streptococci: hamster caries, 695
——: hemolytic; root canals, 496
Sublingual gland: duct and vessel ligation, 866
Succinic dehydrogenase: oral, liver, and brain tissues, 581
Sugars: (see also glucose)
Sulfhydryl groups: gingiva, 255
Sulfonamide: caries resistance, 372
Supporting Associates: J. D. R., 162, 326, 492, 654, 818, 1004
Surface active agents: enamel surface decalcification, 166
SWANSON, A. A.: salivary collagenase; periodontal disease, 717
——: succinic dehydrogenase, DPN cytochrome reductase, cytochrome oxidase, and catalase in oral, liver, and brain tissues, 581
SWARTZ, M. L.: syneresis and imbibition; reversible hydrocolloid, 472
SWEENEY, E. A.: caries; white and cotton rat; antibiotic influences, 349
SYMONS, N. B. B.: distribution; rat developing teeth, 805*

Syneresis: reversible hydrocolloid, 472
SYVERTON, J. T.: hemolytic streptococci in root canals; bacteremia, rheumatic fever, 496

TAKETA, F.: wear resistance of teeth; abrasion method, 739
Tea: fluorine; caries, 220
TELFORD, R. F.: dental amalgam; strength and phase formation, 986
TEN CATE, A. R.: histochemical observations; developing tooth germ, 805*
Testosterone: salivary gland effects, 566
Tetracalcium monohydrogen triphosphate trihydrate; calculus, 816*
Thiamine Cl-HCl: acid production; salivary amylase dextrinization, 343
THOMSEN, S. Ø.: mesiodistal crown diameters; deciduous and permanent teeth, 39
Thyroid: caries, 95, 382, 571, 880
Thyroid gland: caries, 304
Thyroid hormone analogue: rat incisor dentin, 813*
Thyroxine: salivary gland effects, 566
Tin compounds: caries, 399, 780, 787
——: (see also stannous fluoride)
Tissue reaction: acrylic root tips, 27
TONGE, C. H.: oral epithelial differentiation; developmental stages, 806*
TONOGAI, K.: calculus; x-ray analysis, 653*
——: physico-chemical studies; calculus, 653*
Tooth: germ; histochemical observations, 805*
——: measurements; radiographic, 641
——: surfaces; characteristics; rotating instruments, 957
——: transplanted, 153
Transeptal fibers: periodontal disease, 249
Transplanted tooth germs: 1,2,5,6-dibenzanthracene effect, 153
TROMP, S. W.: geographical distribution; caries; Netherlands, 795
Trypan blue: prenatal development, 677
Tryptophan: saliva, 839
Tryptophan deficiency: dietary thryoid influence; bone; periodontium, 13
——: dentin; histochemistry and electron microscopy, 142
TURESKY, S.: protein-bound sulfhydryl and disulfide groups; gingiva, 255
TURNER, N. C.: salivary peroxidase, 843
——: thiamine Cl-HCl effect; acid production; salivary amylase dextrinization, 343
Tyrothricin: caries, 237

Vanadium pentoxide: caries, 787
VAN REEN, R.: dietary casein-sucrose ratios; caries, 904
Vascularity: decreased; dental pulp; caries effect, 92
——: influence on resorption and eruption, 669
VINES, R. F.: densification; dental porcelain, 950
Vitamin A deficiency: 935

WAERHAUG, J.: tissue reaction; acrylic root tips, 27
WAGNER, M. J.: natural and artificial fluoridized waters; metabolism, 552
WALSH, J. P.: influence of surface agents; enamel surface decalcification, 166
WALSH, R. H.: powdered enamel solubility; sodium fluoride; stannous fluoride; buffered, 118
Wear resistance: teeth; abrasion method, 739
WEATHERELL, J. A.: fluorine effect; hard tissues, 816*
WEBSTER, R. C.: salivariadenectomy; reproductive organ effects; female rat, 559
——: salivary glands of hypophysectomized rats; testosterone; thyroxine and cortisone effects, 566
WEDDLE, D. A.: sodium fluoride; sodium silicofluoride and stannous fluoride; metabolism comparison, 386
WEIDMAN, S. M.: fluorine effect; hard tissues, 816*
WEISENSTEIN, P. R.: caries-immune individuals; clinical and bacteriologic studies, 690
——: salivary lactobacilli and dental caries activity; children, 828
WHEATCROFT, M. G.: serum and salivary antibody titers; *Brucella melitensis*, 112
WILLETT, N. P.: salivary protease activity; caries-resistant and caries-susceptible rats, 223
WILLIAMS, N. B.: antigenic analysis; heterofermentative lactobacilli strains, 361
WILSON, R. T.: amalgam restorations; mercury content; condensation procedures, 458
WOLF, W.: caries experience; Evanston children; exposed to fluoridated water, 208
WOLFE, A. D.: salivary peroxidase, 843
WOLFE, H. L.: salivary citrate; dental caries experience, 823

X-ray analysis: calculus, 653*
X-ray density: mandible; variation, 451
X-ray irradiation: dental effects, 417

YAMADA, M.: photoelastic consideration; bridge abutment teeth, 652*
YARDENI, J.: fluorine; Israeli children; caries, 203
YOSHIOKA, S.: physico-chemical studies; calculus, 653*

ZENEWITZ, J. A.: hamster; dentin and enamel; KOH ethylene glycol extracted; composition, 684
ZIPKIN, I.: caries experience; salivary sodium, potassium, solids and ash, 525
——: salivary citrate; dental caries experience, 823
ZWAARDEMAKER, J. B.: geographical distribution; caries; Netherlands, 795
ZWEMER, J. D.: lactic acid formation; lactobacilli; fluoridized enamel, 182
